

Progress Update

Trevor Towstego
2-Ring ν_e CC1 π^+ Meeting
January 16, 2018

NIWG Plots

- Over the break, Roger Wendell asked me to produce some plots for the NIWG
 - based on similar plots Yoshida-san had made for the ν_μ CC1 π^+ sample
- Plots show the combined 0 decay e and 1 decay e sample
- Event selection was done using the v1 trial 8 BDT (the best-performing BDT so far)

True neutrino energy

NEUT mode

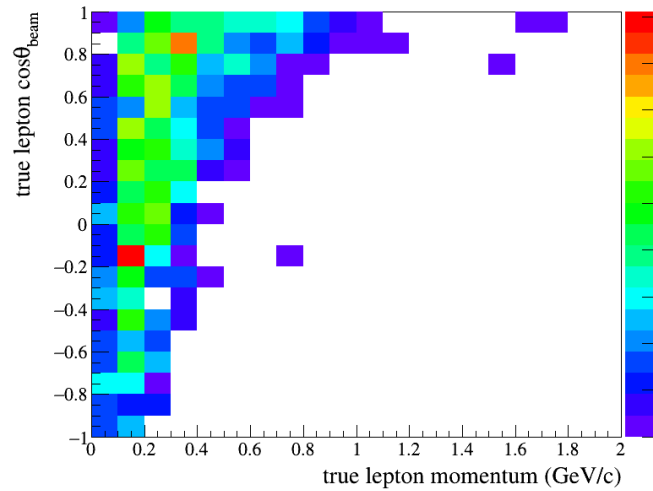

True lepton kinematics

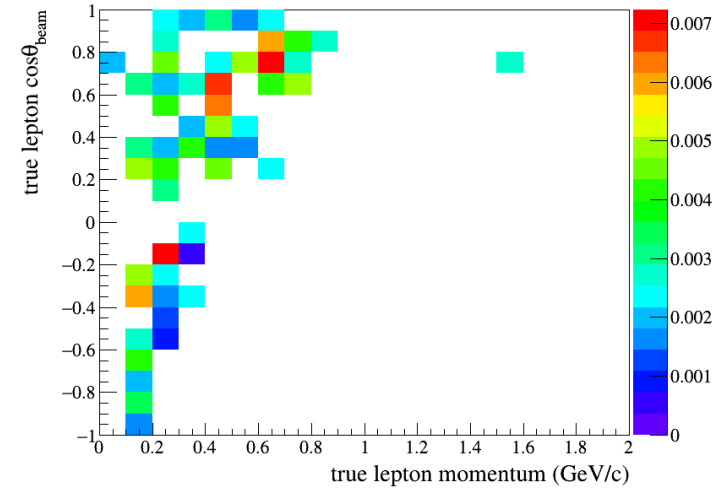

True lepton kinematics: ν_e CC QE

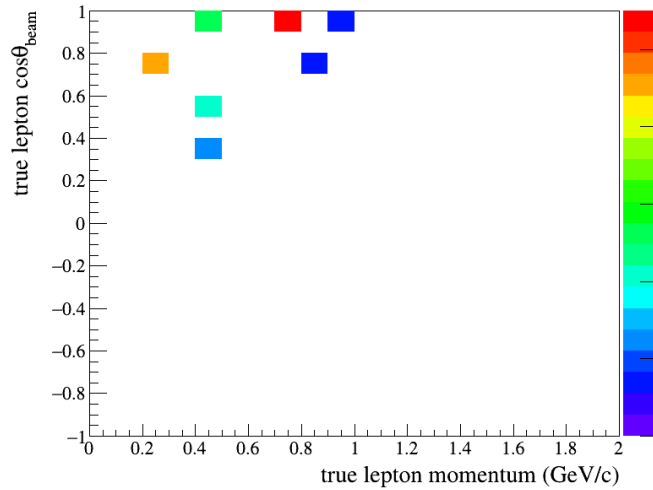

True lepton kinematics: ν_e CC $1\pi^+$

True lepton kinematics: ν_e CC multi- π

True lepton kinematics: ν_e CC DIS

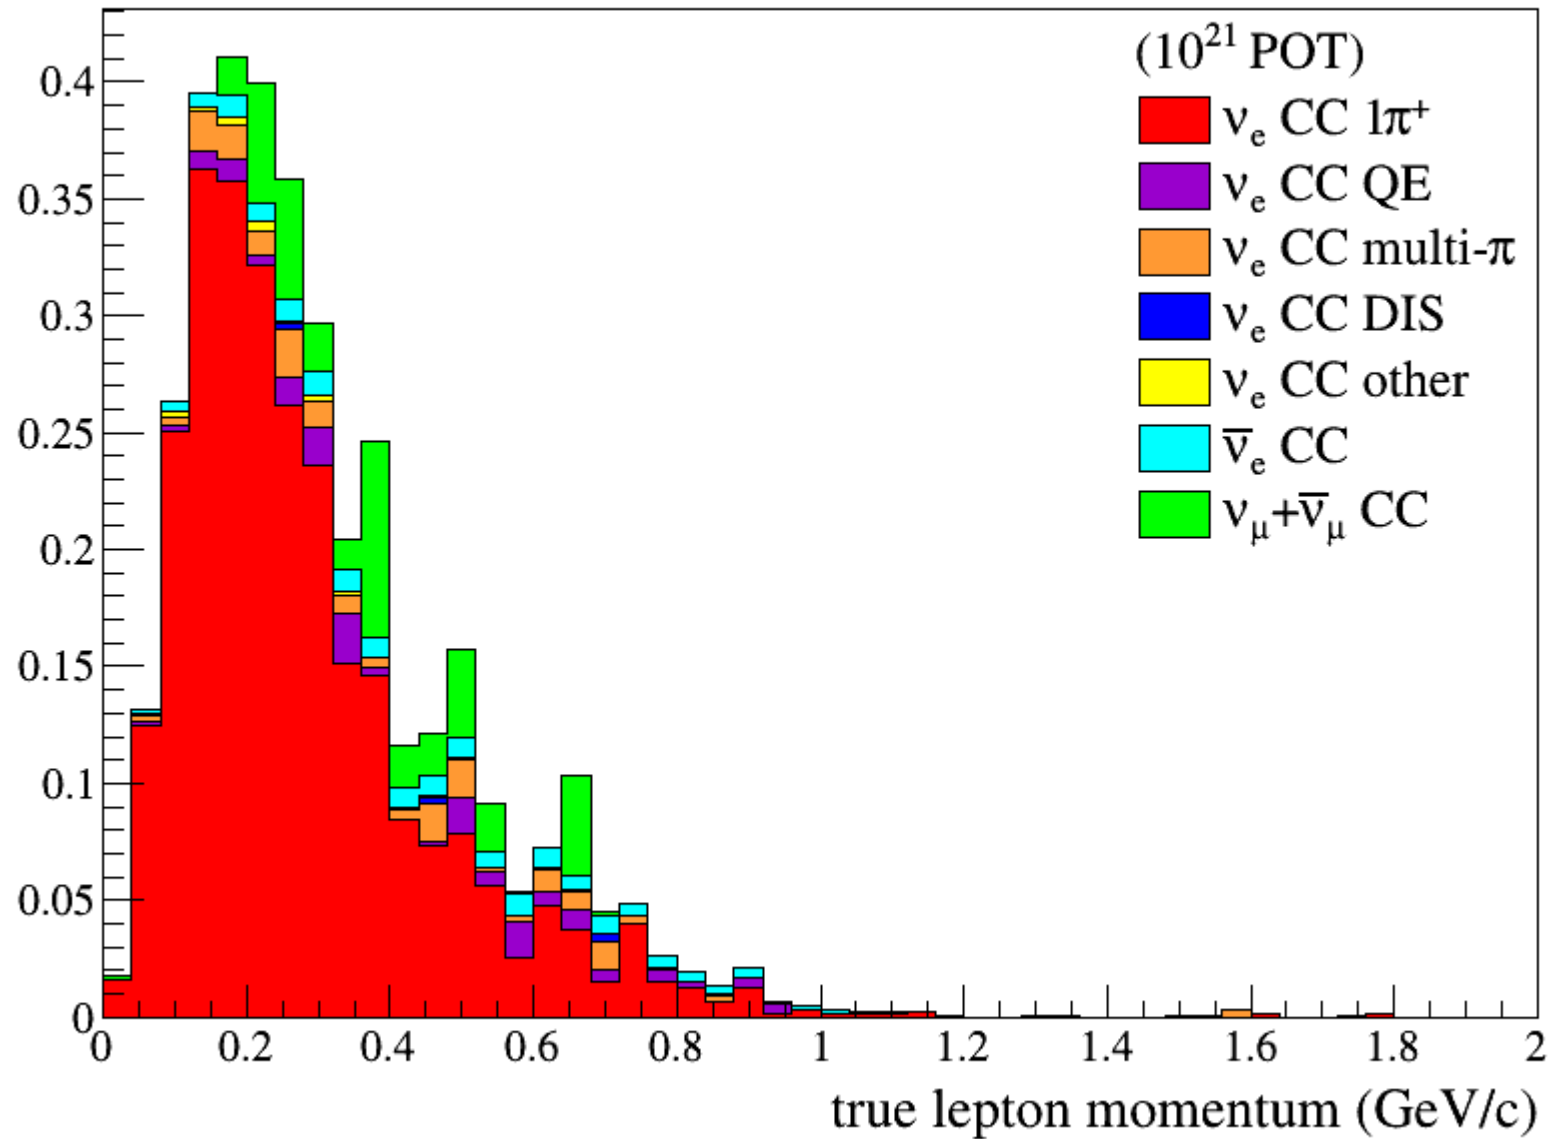

True lepton kinematics: ν_e CC other

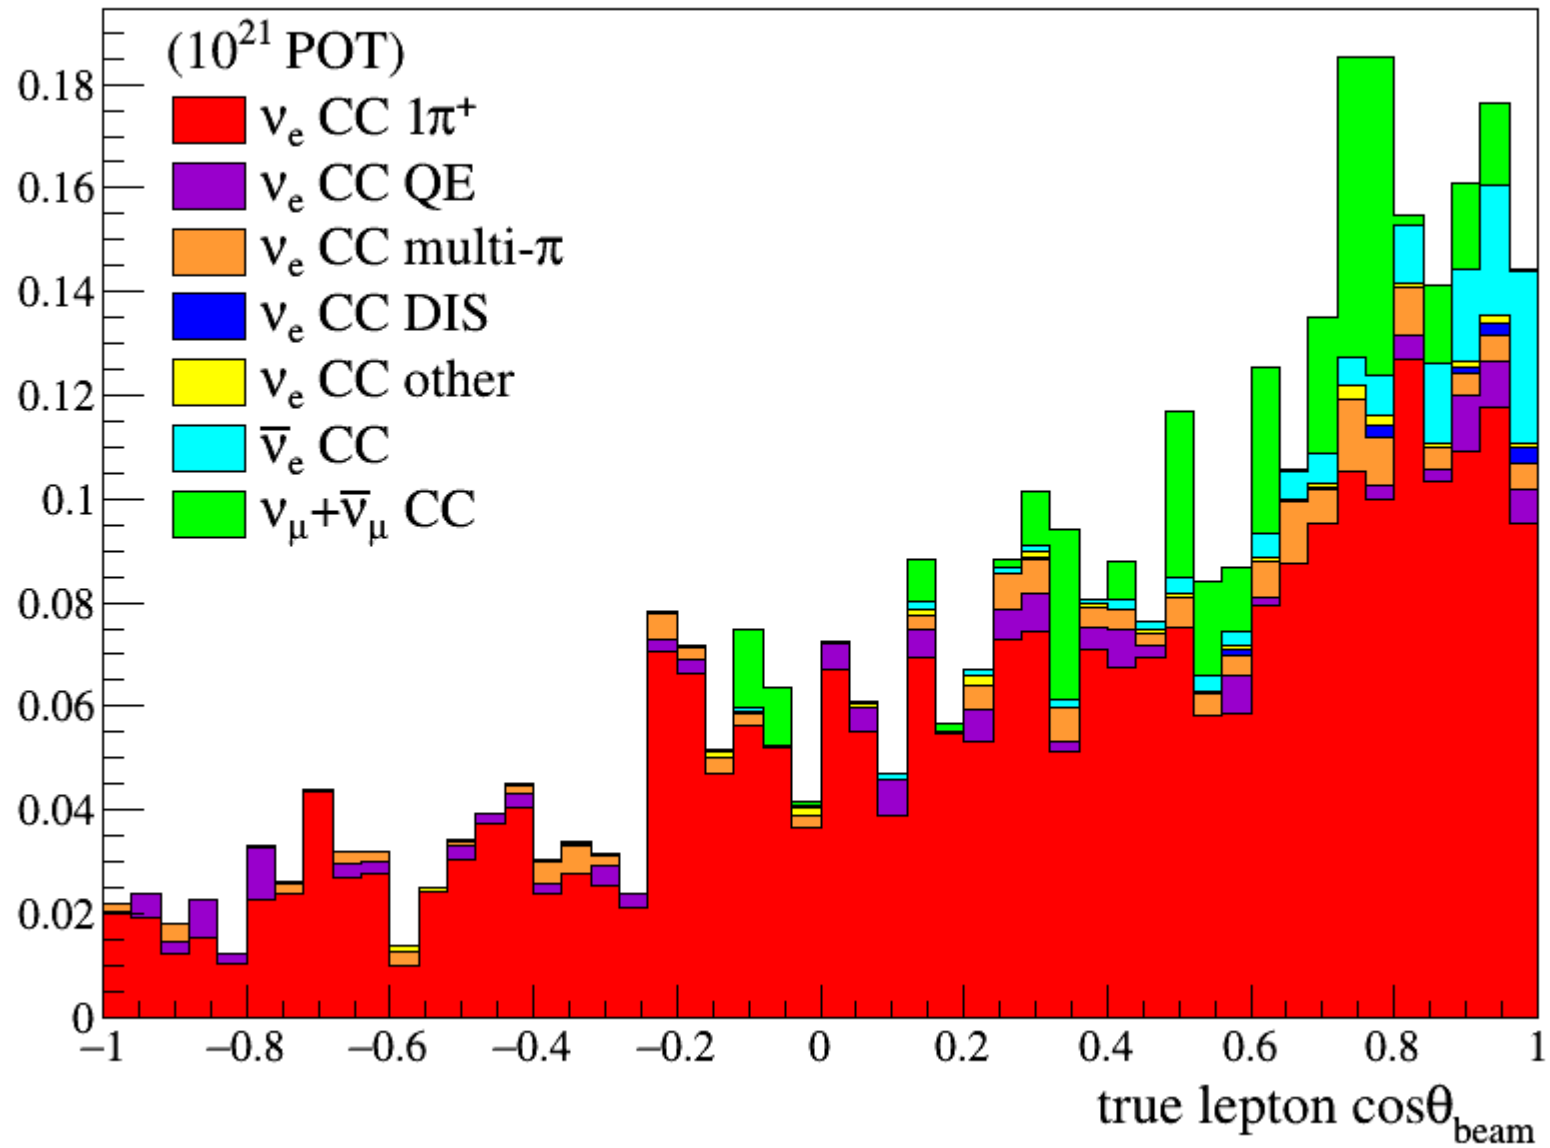

True lepton kinematics: $\bar{\nu}_e$ CC

True lepton momentum

True $\cos(\theta_{\text{beam}})$ of lepton

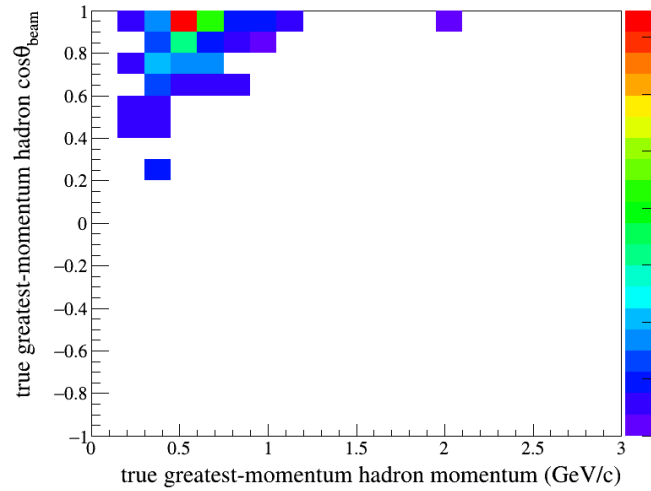

True kinematics of greatest-momentum hadron

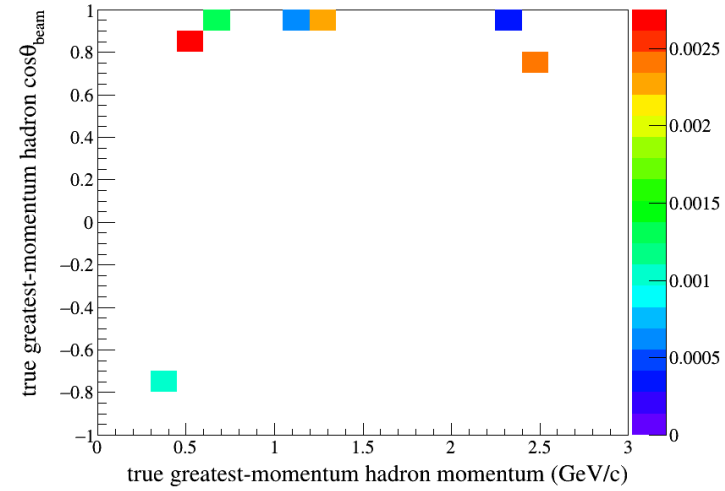

True kinematics of greatest-momentum hadron: ν_e CC $1\pi^+$

True kinematics of greatest-momentum hadron: ν_e CC multi- π

True kinematics of greatest-momentum hadron: ν_e CC DIS

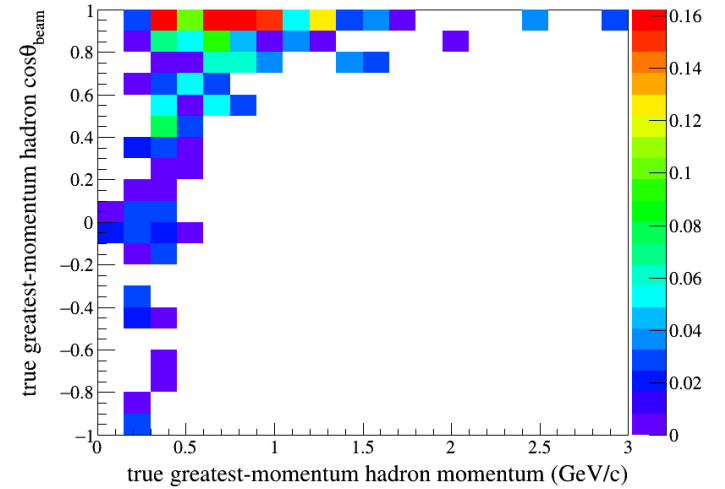

True kinematics of greatest-momentum hadron: ν_e CC other

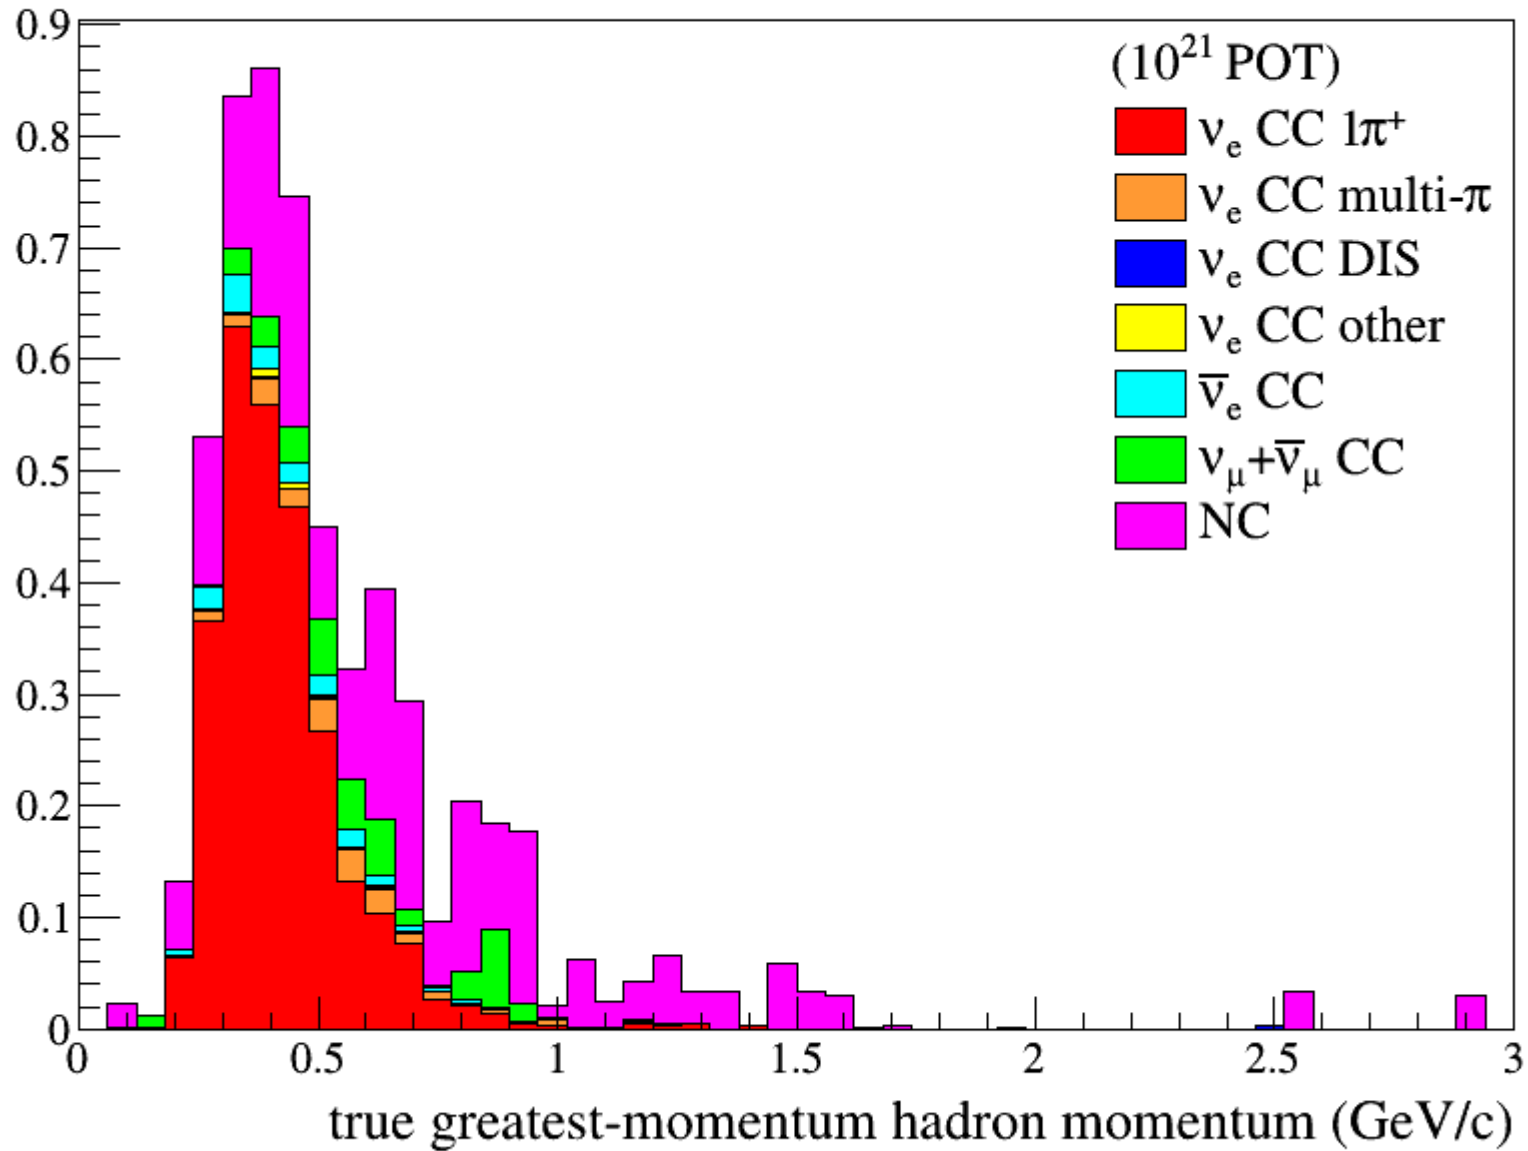

True kinematics of greatest-momentum hadron: $\bar{\nu}_e$ CC

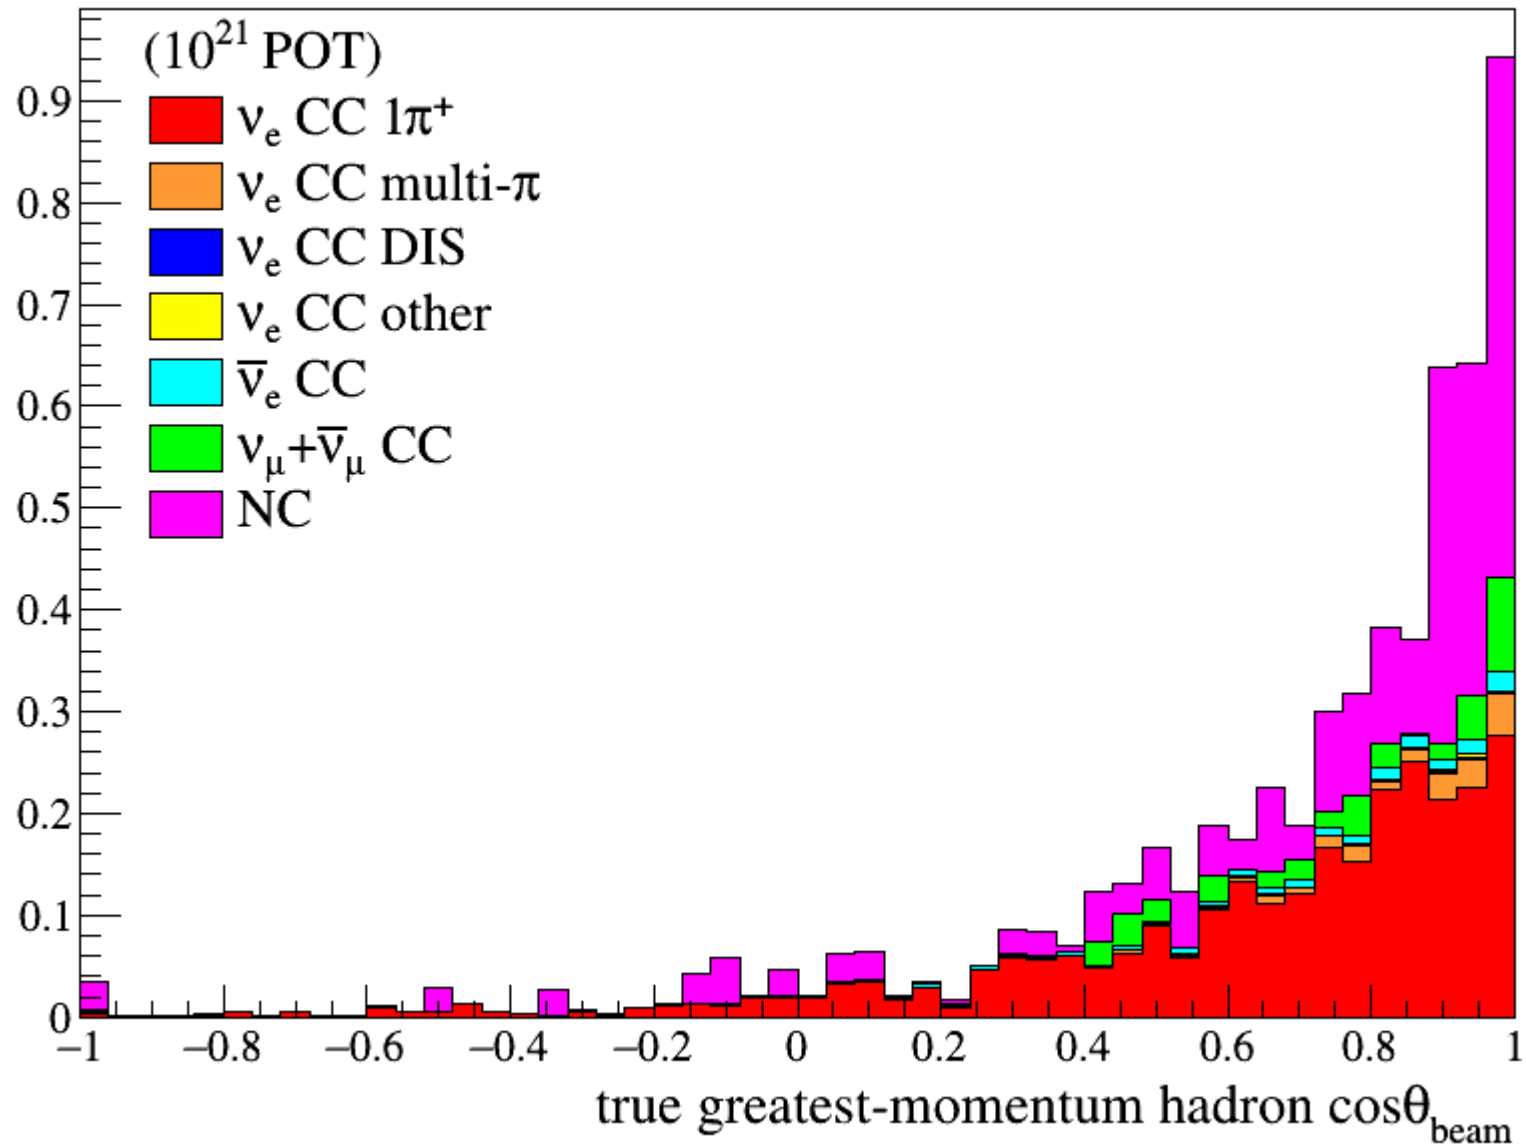

True kinematics of greatest-momentum hadron: NC

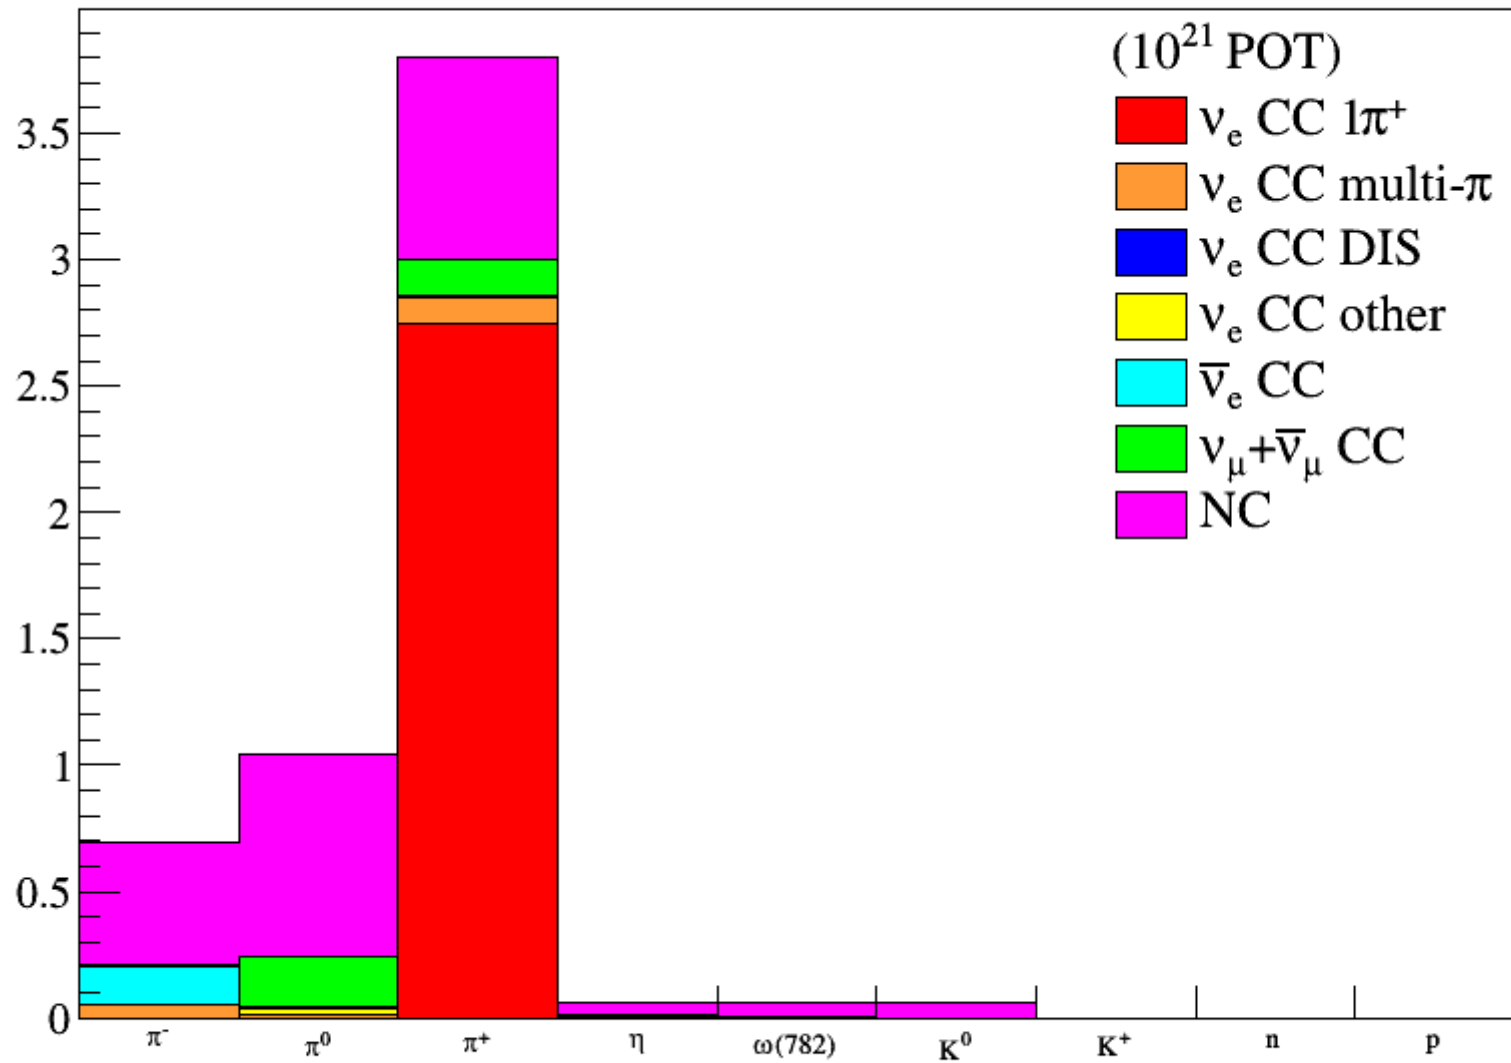

True momentum of greatest-momentum hadron

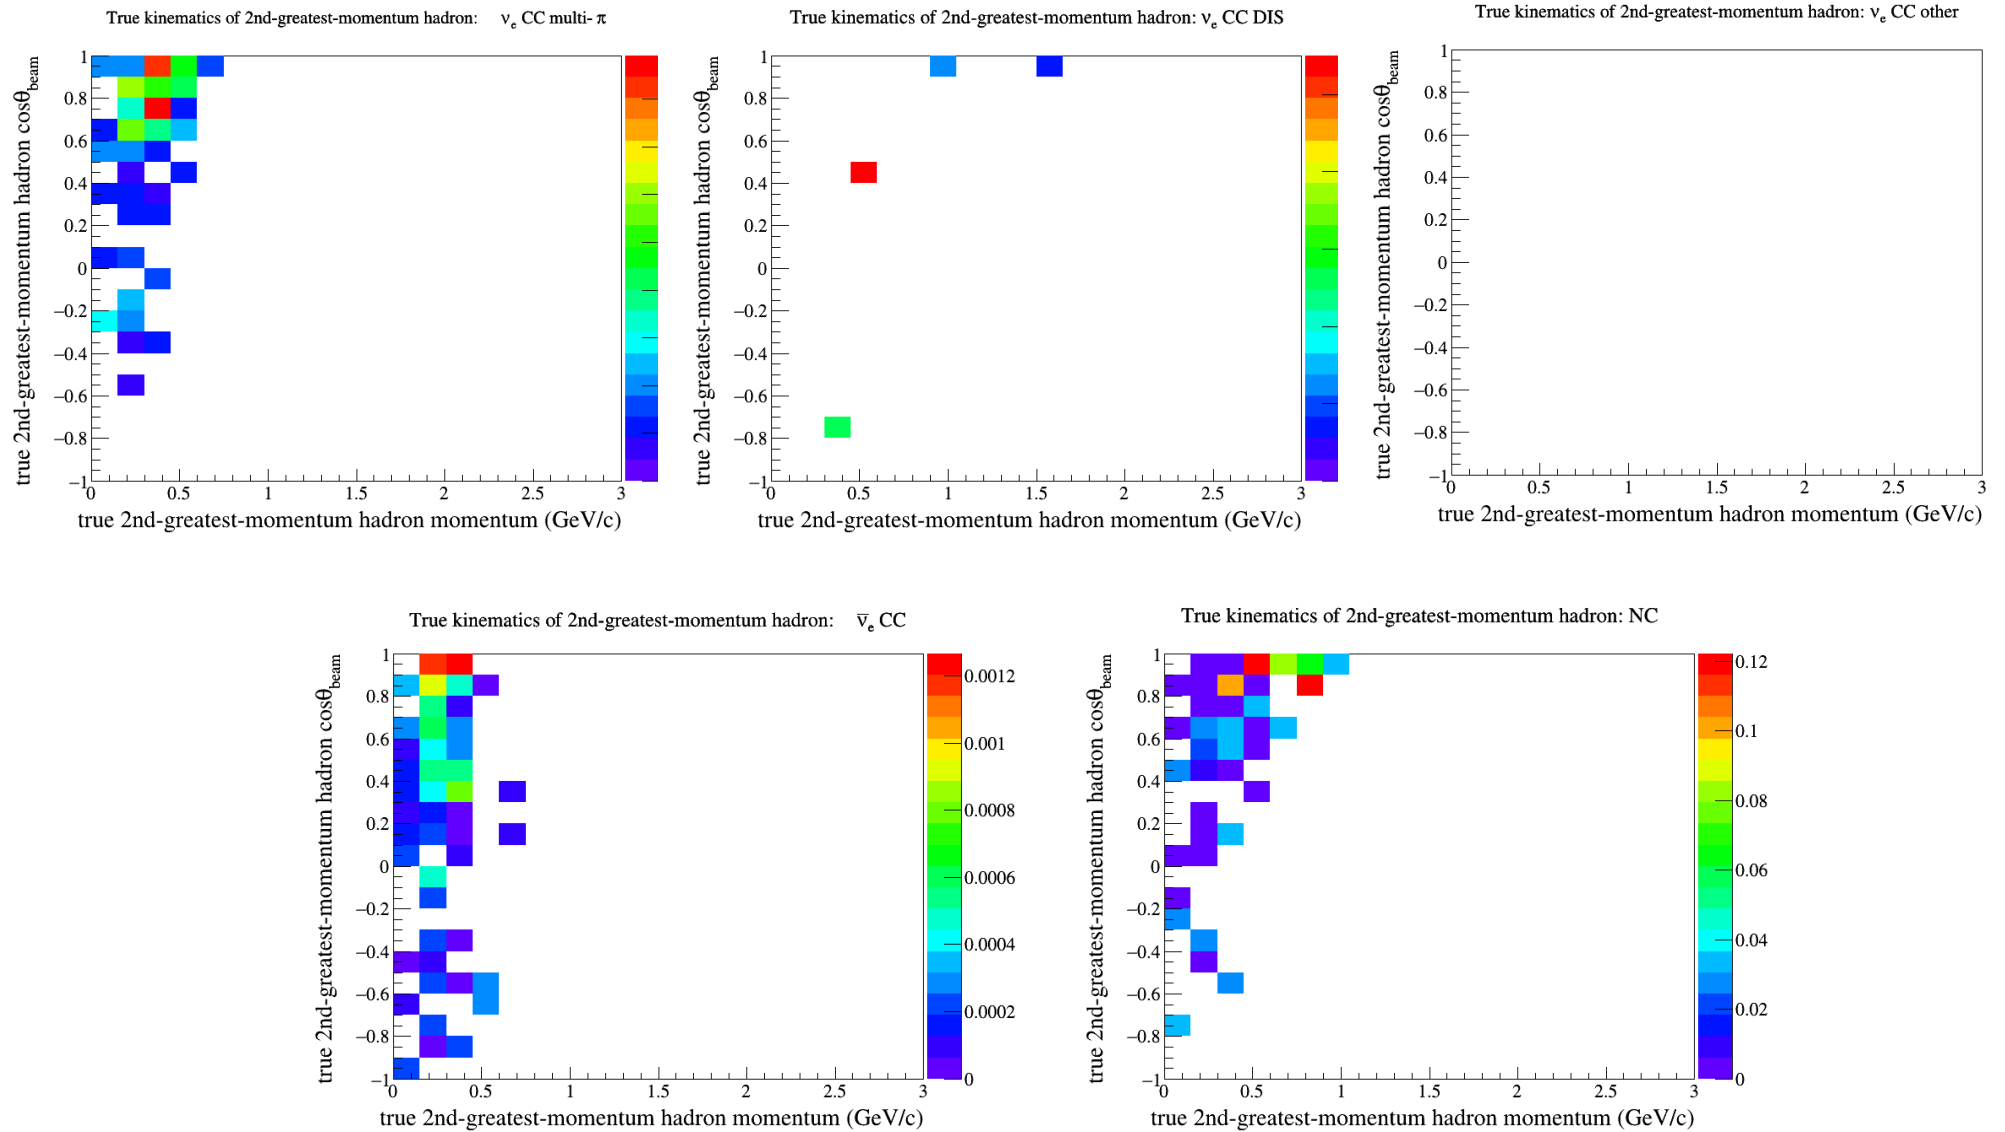

True $\cos(\theta_{\text{beam}})$ of greatest-momentum hadron

PID of greatest-momentum hadron

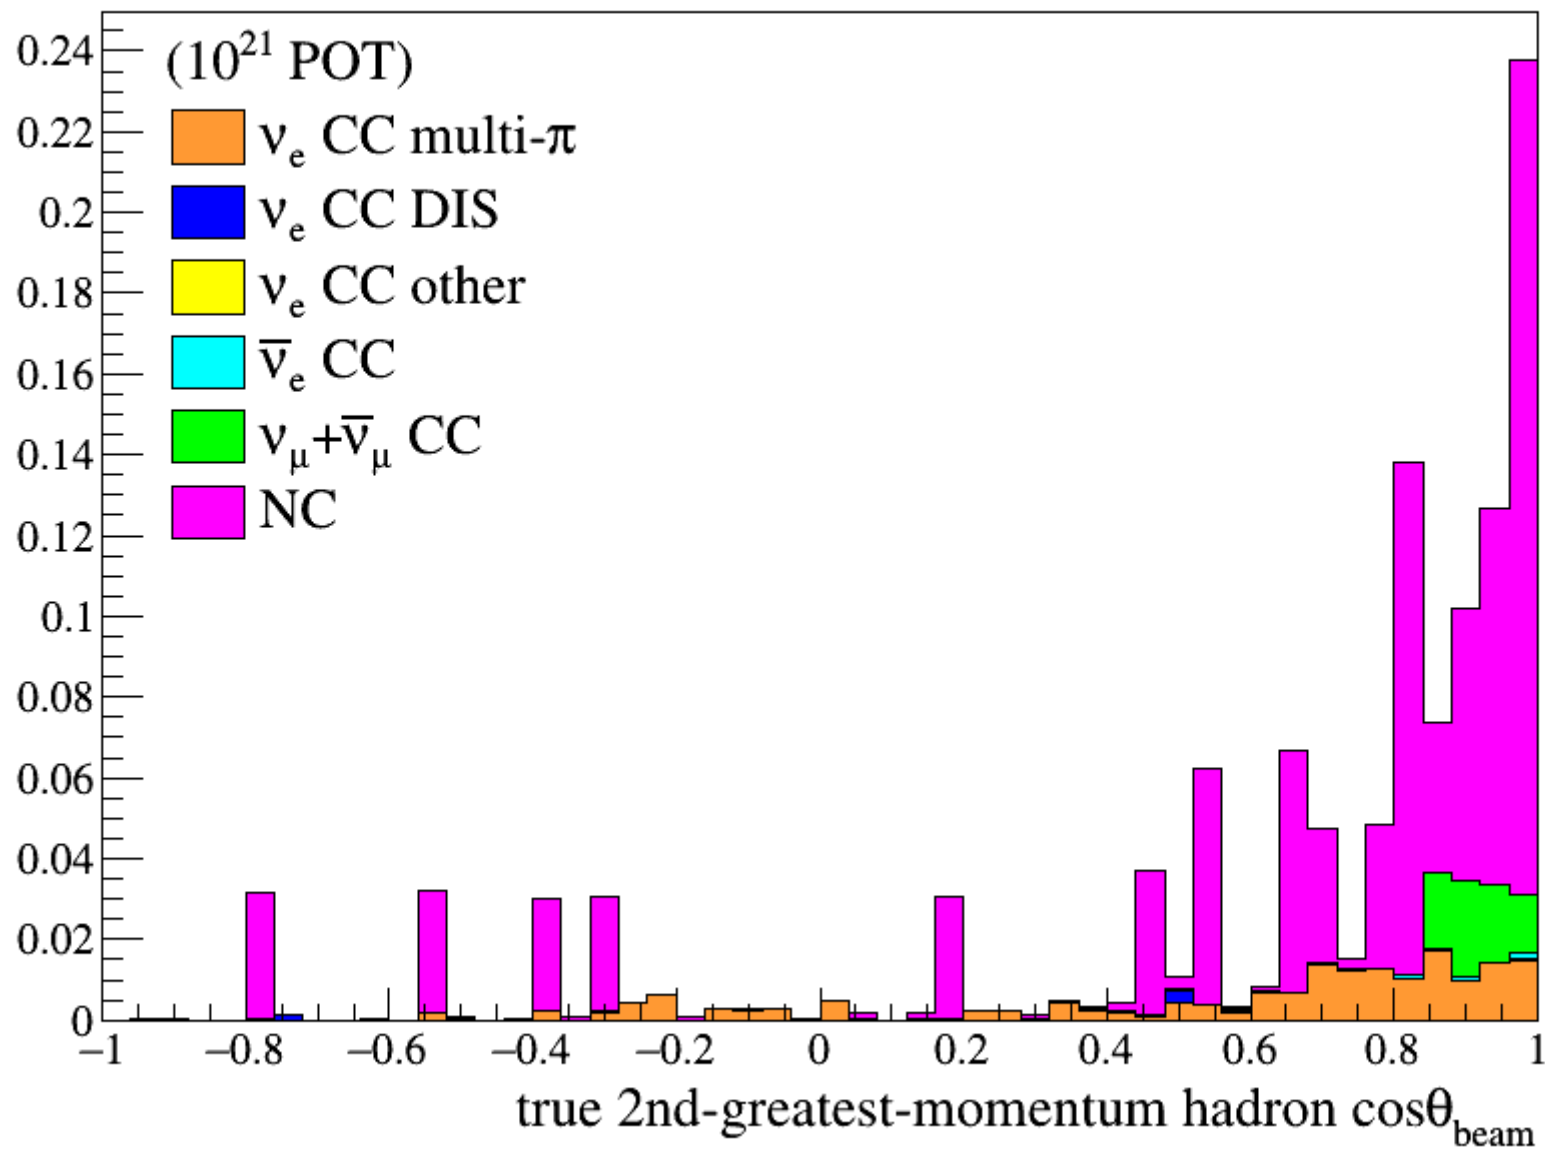

True kinematics of 2nd-greatest-momentum hadron

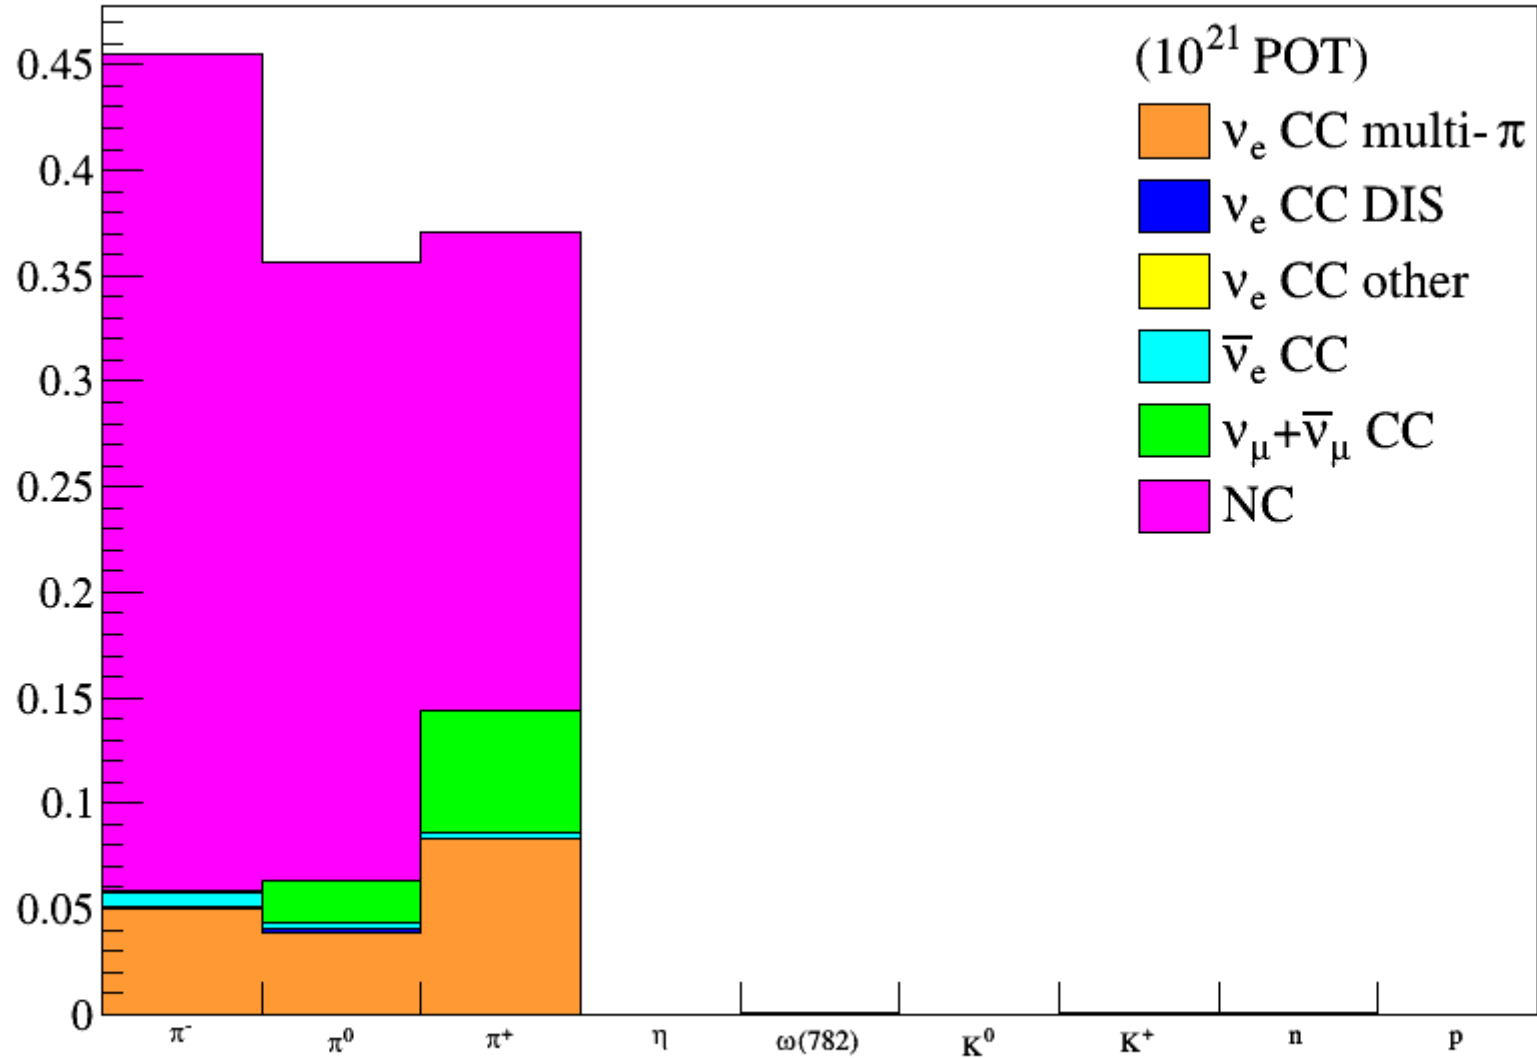

True momentum of second-greatest-momentum hadron

True $\cos(\theta_{\text{beam}})$ of second-greatest-momentum hadron

PID of second-greatest-momentum hadron

Current Work

- fiTQun jobs still running on Cedar
 - Two “array jobs” submitted before the break – one for GENIE and one for NuWRO
 - Each array consisted of 2800 individual jobs
 - Vast majority have now been completed
 - Hopefully finished within a week or two
- Streamline code and scripts
 - pre-BDT cuts, BDT training/testing, event selection, plots/tables
- Start focusing on FSI/SI systematics
 - Elder’s covariance matrix
 - Existing code to pull from parameter space and re-weight events?
 - E-mail Elder and Sophie
