

## **update**

- ncgamma analysis tools and the new Kamioka computer system
- E493 energy calibration of HPGe detectors

Corina Nantais  
Group meeting  
09 March 2017

# ncgamma analysis tools

work with the  
new Kamioka computer system  
from February 2017

# Some notes from my processing Run 4 data

- co from svn
- didn't need password this time?
- comment out everything in alexenv.csh, won't use anyway
- ~~comment out everything but LD\_LIBRARY\_PATH because SterileAna in skenv\_py.csh~~ (can't do this, as I will explain)

.cshrc

- try to comment out SKPATH
- without it, there is no SKPATH so put it back

<b>Fukuda-san</b>	<b>Corina</b>
LD_LIBRARY_PATH=/home/skofl/sklib_g77/skofl_14c/lib:/home/cnantais/ncgamma/SterileAna/lib:/usr/local/sklib_g77/root_v5.28.00h/lib:/home/skofl/sklib_g77/skofl_14c/lib:/home/skofl/sklib_g77/root_v5.28.00h/lib:/usr/local/lib	LD_LIBRARY_PATH=/home/skofl/sklib_g77/skofl_14c/lib:/home/cnantais/ncgamma/SterileAna/lib:/usr/local/sklib_g77/root_v5.28.00h/lib:/home/skofl/sklib_g77/skofl_14c/lib:/home/skofl/sklib_g77/root_v5.28.00h/lib:/usr/local/lib: <b>/usr/local/lib</b>

# T2K-SK t2k.org needs to be updated, I think

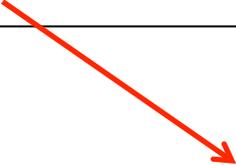

## 14a Data and MC Info

by [Alexander Himmel](#) — last modified Feb 28, 2017 12:45 PM — [History](#)

### MC Files

14a MC are generated based on:

- 13a nominal flux
- NEUT 5.3.2 (Spectral function MC)
- skdetsim-v13p90
- 14b SK software (apfit\_14b, fitQun\_v4r0).

we are using 14c SK software

# neut

hayato@suketto.icrr.u-tokyo.ac.jp

Mar 4 (3 days ago) ☆

to michael.wilking, wendell.roger., okumura, koshio, cnantais, htana ▾

Dear Mike-san,

I think it is ( basically ) fine.

However, one thing I'd like to ask you to keep in mind that the previous low energy gamma analyses used dedicated Monte-Carlo because the nominal ones are not using the spectral function NCEL cross-section. Therefore, one have to reweight NCEL cross-section when they try to obtain consistent plots as Ueno-san and the others made in the previous.

Best,  
Yoshinari

Even if the updates to the spectral function are included in the newer versions of neut, like 5.3.5, we would still generate our own MC, correct?

# Environmental variables and lowfit both look ok

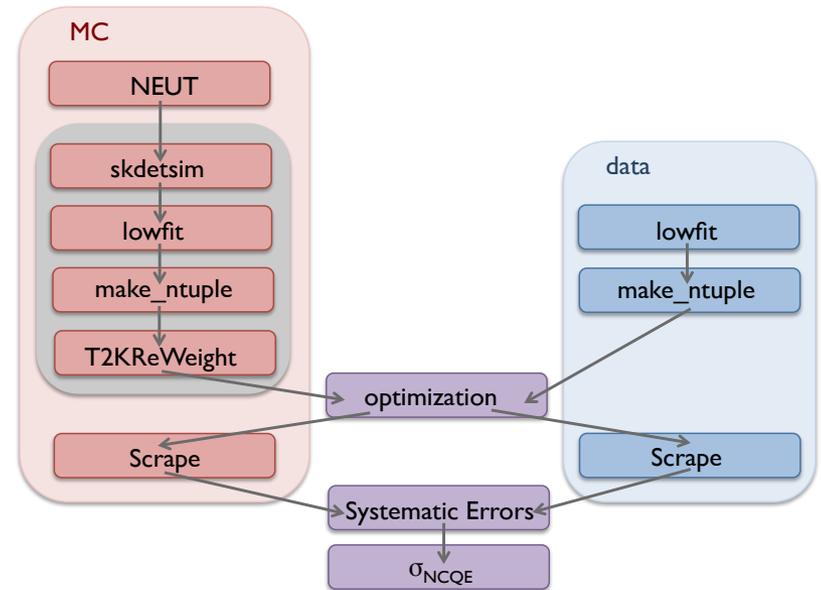

csh

source skenv\_py.csh (not alexenv.csh)

- looks ok, root and python work

lowfit/ make

- looks ok

# T2K first reduction, cut on GPS

lowfit/RunData.sh

T2K Run 8 (I found this, James confirmed)

```
/disk01/sklb2/t2kdata/process/1stred[sukap001 1071] ls  
0753 0754 0755 0756 realtime  
/disk01/sklb2/t2kdata/process/1stred[sukap001 1072] █
```

T2K Run 1-7 (from Akutsu-san)

```
/disk01/sklb/OLD/t2k/1stred[sukap001 1069] ls  
0654 0663 0672 0681 0690 0699 0708 0717 0726 0735 0744 0753  
0655 0664 0673 0682 0691 0700 0709 0718 0727 0736 0745 realtime  
0656 0665 0674 0683 0692 0701 0710 0719 0728 0737 0746  
0657 0666 0675 0684 0693 0702 0711 0720 0729 0738 0747  
0658 0667 0676 0685 0694 0703 0712 0721 0730 0739 0748  
0659 0668 0677 0686 0695 0704 0713 0722 0731 0740 0749  
0660 0669 0678 0687 0696 0705 0714 0723 0732 0741 0750  
0661 0670 0679 0688 0697 0706 0715 0724 0733 0742 0751  
0662 0671 0680 0689 0698 0707 0716 0725 0734 0743 0752
```

this is where you find SK beam summary and GPS information  
looks the same, so no change

set sklb = /home/sklb/reduction/list/  
sk\_beam\_summary/ and window/

easy

set odir = /disk01/usr4/cnantais/lowedata/lowfit

FHC

RHC

both

nothing

not sure yet

MR run to SK run, look at runlist.run\*\* in /  
home/sklb/reduction/shell/05\_final/

T2K Run (1-6b) to MR run (29-61),  
see T2K-SK documentation

MC Reweighting I4a Data and MC Info  
(needs to be updated)

→ where is T2K Run 7-8 and MR run 62-72?

→ Akutsu-san told me to see TN284 for all  
T2K Run to MR run (p.4 & p.6)

# lowfit/find\_beamrun.sh

Run 58–72 (T2K Run 6–8)

`indir=/home/sklb/reduction/shell/05_final`

I found Run 29–68 (T2K Run 1-6) here:

`indir=/home/sklb/reduction/shell/05_final/2017feb_BSDupdated/`

# lowfit/runlowedata.py

updated t2kskrun with T2K Run 5–8

easy

```
pdir="/disk01/usr4/cnantais/lowedata"
```

```
#T2K Run 8
```

```
#reducdir = "/disk01/sklb2/t2kdata/process/lstred/%04d/%06d" %(run4,skRun)
```

```
#T2K Run 1-7
```

```
reducdir = "/disk01/sklb/OLD/t2k/lstred/%04d/%06d" %(run4, skRun)
```

```
#writestr = "source /home/cnantais/ncgamma/alexenv.csh\n"
```

```
writestr = "source /home/cnantais/ncgamma/skenv_py.csh\n"
```

# script/sample\_\*.csh

- sources skenv\_py.csh
- maybe put SKOFL\_ROOT back in skenv\_py.csh?
- now complains about ROOTSYS
- so uncomment all of skenv\_py.csh

```
setenv top /usr/local/sklib_g77
setenv SKOFL_ROOT $top/skofl_14c
setenv SOFTVER "14c"
setenv CERN $top/cern
setenv CERN_LEVEL 2005

setenv ROOTSYS $top/root_v5.28.00h
setenv PYTHONPATH $ROOTSYS/lib:${PYTHONPATH}
setenv NEUTROOT $top/neut_5.3.2
setenv NEUT_ROOT $NEUTROOT
setenv LD_LIBRARY_PATH "$SKOFL_ROOT/lib:/home/cnantis/ngamma/SterileAna/lib:\
$ROOTSYS/bin/root-config --libdir`:$LD_LIBRARY_PATH"
setenv ATMPD_ROOT $top/atmpd_$SOFTVER
setenv PATH "$SKOFL_ROOT/bin:$ATMPD_ROOT/bin:$ROOTSYS/bin:$CERN_ROOT/bin:$PATH"
setenv SKPATH "${SKOFL_ROOT}/const:${ATMPD_ROOT}/const:${SKOFL_ROOT}/const/lowe\
:/skam/const"
```

# It worked!

try I SK run (70524) in runlowedata.py

there are root files in lowfit/run\*!!!

compare to last time, January 2016

# Warnings in err files?

- warning in err files, but in jan17 err files were empty
- looked at data.lowfit.70524.938.root from today and jan17
- 10.755 kB vs 10.747 kB (jan17), so that's good
- each branch is the same size, can't seem to look at in TBrowser, both crash?
- how else to compare?

```
Warning in <TStreamerInfo::BuildCheck>:  
The StreamerInfo of class TLeafD read from file /home/sklb/reduction/list/skbeamsummary/sk_beam_summary.run44.root  
has the same version (=1) as the active class but a different checksum.  
You should update the version to ClassDef(TLeafD,2).  
Do not try to write objects with the current class definition,  
the files will not be readable.
```

```

```

# do all Run 4 data

16 min to submit

2h25 min to run

compare size of lowfit/

du -sh lowfit/

today

3.9 TB

101 MB err/

4.1 GB out/

jan17

5.2 TB

23 MB err/

5.5 GB out/

Jan17 has 70524 – 73521 – that's Run 6!!! from when I was testing antineutrino changes

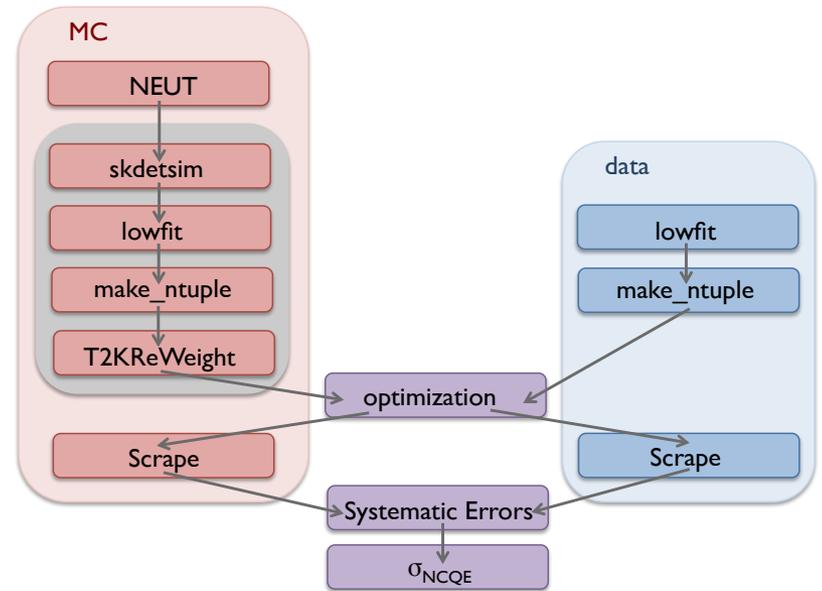

jan7

3.9 TB

23 MB err/

4.1 GB out/

# Now, data make\_ntuple

# ncgamma/make\_ntuple/

make

- looks ok

no changes to RunNtupleMaker.sh

# rundatafill.py

start with only one SK run to test

```
t2kskrun={4:[70524,70524]}
```

added T2K Runs 5-7

easy

```
#pdir="/disk/usr4/cnantais/lowedata"
```

```
pdir="/disk01/usr4/cnantais/lowedata"
```

```
#writestr = "source /home/cnantais/ncgamma/alexenv.csh\n"
```

```
writestr = "source /home/cnantais/ncgamma/skenv_py.csh\n"
```

```
#print >>fsub, "qsub -q all -o %s -e %s %s" %(outname, errname, cshfname)
```

```
print >>fsub, "qsub -q ALL -o %s -e %s %s" %(outname, errname, cshfname)
```

# It worked!

python rundatafill.py

produces csh files in script/ and nqs\_list\_alldata

./nqs\_list\_alldata

took a while because many lowe jobs queued, maybe use ALL instead?

output in disk01/.../lowedata/ntuple/run70524/data.70524.\*.root

root files have a size

insides root file, branches have a size

all err files are size 0 (same as jan07)

however, jan07 has some non-zero err files? look into that later

out files are approximately the same size

# runmerge.py

start with only one SK run to test

```
t2kskrun={4:[70524,70524]}
```

added T2K Runs 5-7

easy

```
#rootfdir="/disk/usr4/cnantais/lowedata/ntuple"
```

```
rootfdir="/disk01/usr4/cnantais/lowedata/ntuple"
```

```
#writestr = "source ~ahimmel/skenv.csh\n"
```

```
writestr = "source /home/cnantais/ncgamma/skenv_py.csh\n"
```

# It worked!

`python runmerge.py`

produced `merge_*.csh` in `script/` and `nqs_list_merge`

`merge_*.csh` looks messy, but so does one in `jan7`

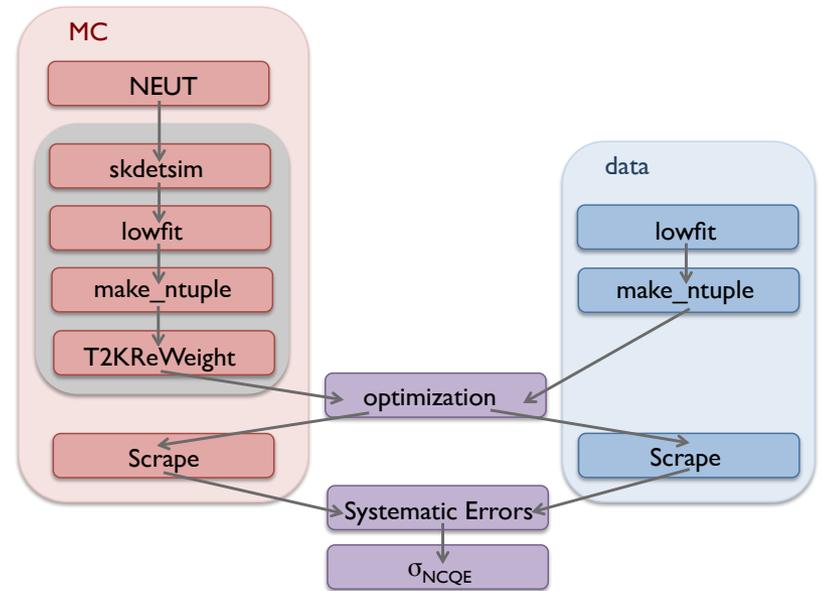

output in `disk01/.../lowedata/ntuple/run70524/data.70524.*.submerge*.root`

root files same size as `jan7`

root branches same size as `jan7`

output in `disk01/.../lowedata/ntuple/data.lowfit.70524.merge.root`

root file and branches same size as `jan7`

Next, do `make_ntuple` on all Run 4 data

And then MC

# Fukuda-san progress

Had started with MC side, having problems with skdetsim.  
Asked him to send me details and maybe I could help.

Compiled and ran lowfit for data, no root files in output.  
He will follow my instructions in these slides.

# Other notes from ncgamma local meeting

Nothing specific, but try to think of ways to improve the reduction step. Currently follows SK lowe. Check each reduction step.

Wait for retuned skdetsim. They might take more LINAC data this summer. Not enough good data from last summer.

Hayato-san strongly recommends moving from g77 to gcc. g77 isn't supported anymore. Do this after we reproduce T2K Run 1–4 results.

# E493

I will be responsible for

- HPGe data analysis (two detectors)
- FLUKA simulations
- studying libraries and papers on nuclear reactions

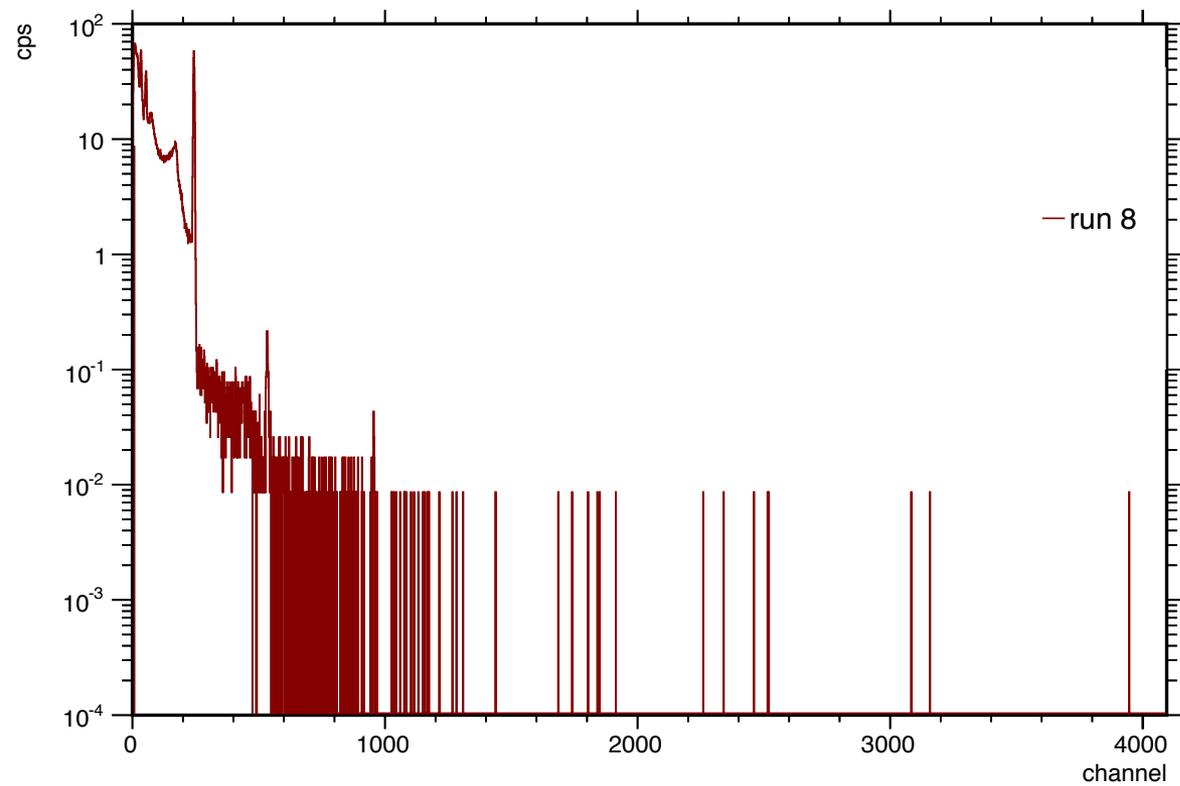

# Two HPGe detectors

- small HPGe #1 is the same as E465
- large HPGe #2 is from Canberra
  
- 2.7 MeV and 3.2 MeV peaks are beam related backgrounds
- large HPGe #2 doesn't see 2.7 MeV and 3.2 MeV peaks?
- will look into
  
- 8 MeV peak wasn't observed consistently in both detectors, and also seemed to change channel position
- will look into

# HPGe #1 small calibration

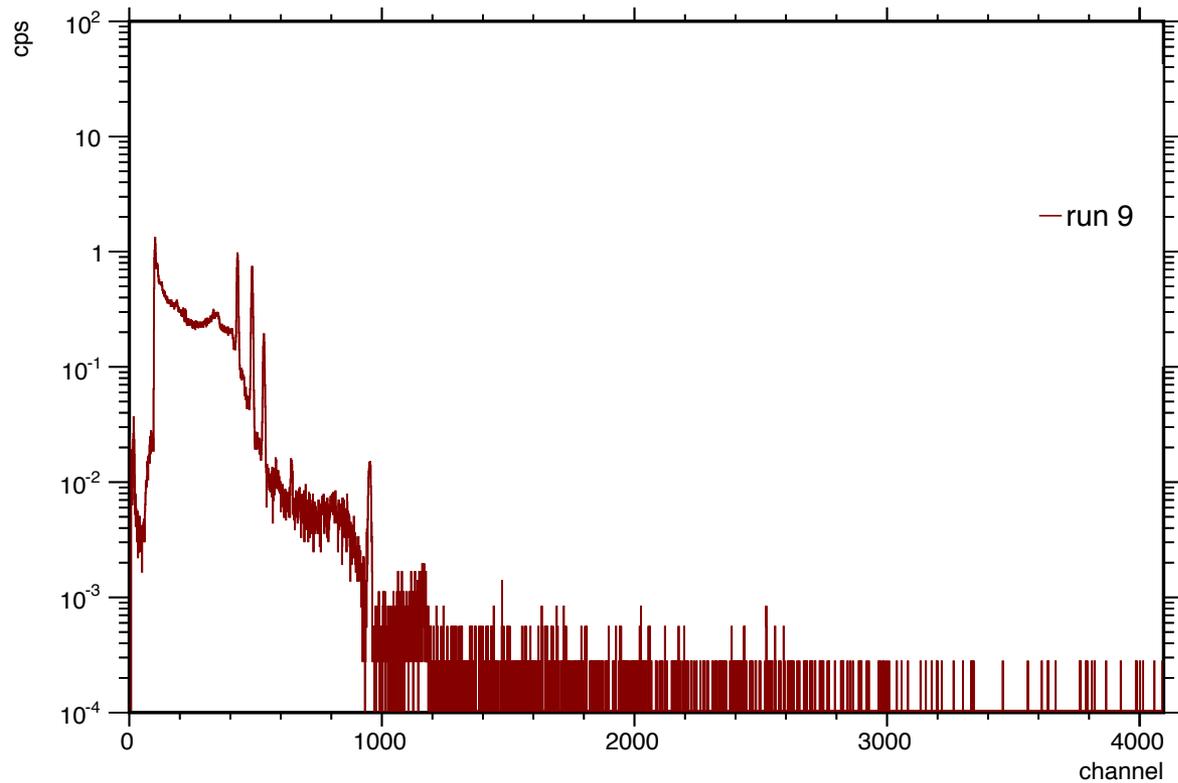

# $^{137}\text{Cs}$

- 20170219
- run 8
- 3 peaks: 662 keV,  $^{40}\text{K}$ ,  $^{208}\text{Tl}$

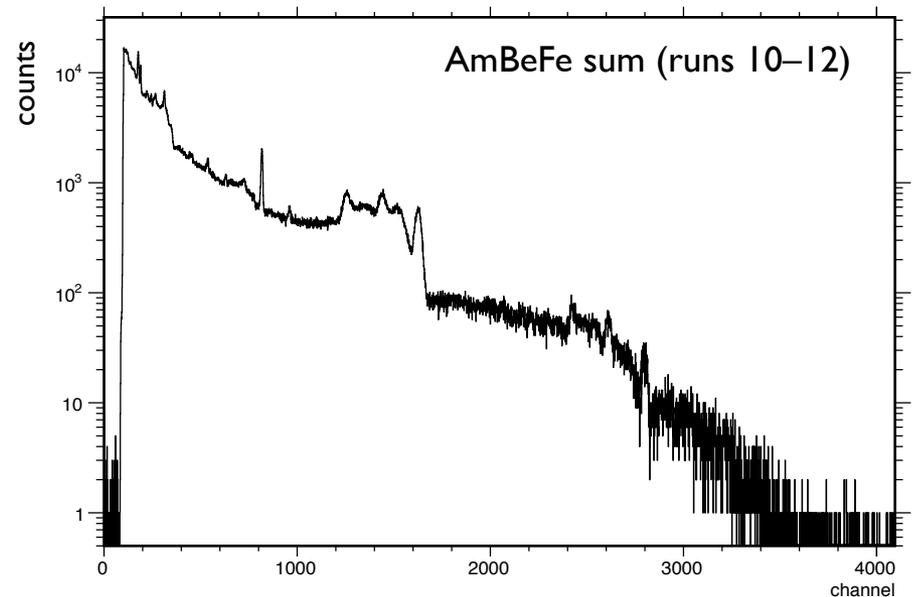

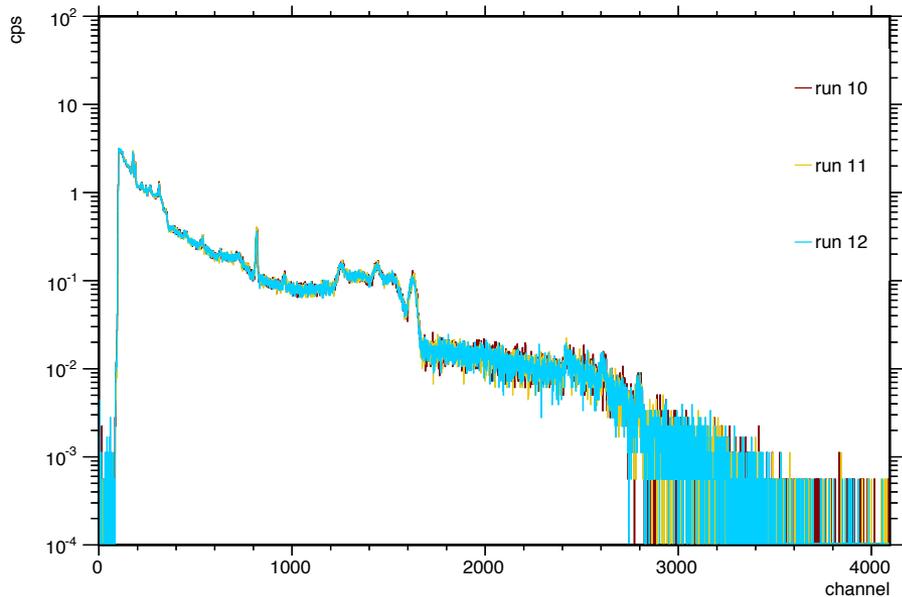

# $^{60}\text{Co}$

- 20170219
- run 9
- 3 peaks: 1.17 MeV, 1.33 MeV,  $^{40}\text{K}$
- can't resolve sum peak and  $^{208}\text{Tl}$  into 2 peaks, so didn't use  $^{208}\text{Tl}$

# AmBeFe

- 20170220
- runs 10–12
- annihilation (and  $^{40}\text{K}$ ) not clearly visible
- there must be PE too, because can see  $^1\text{H}(n,\gamma)$
- 4 peaks =  $^1\text{H}(n,\gamma)$ , AmBeDE, AmBeSE, AmBe
- same spectra, rate, slope, intercept  $\rightarrow$  combined spectrum
- add TI, FeDE, FeSE, Fe for combined spectrum

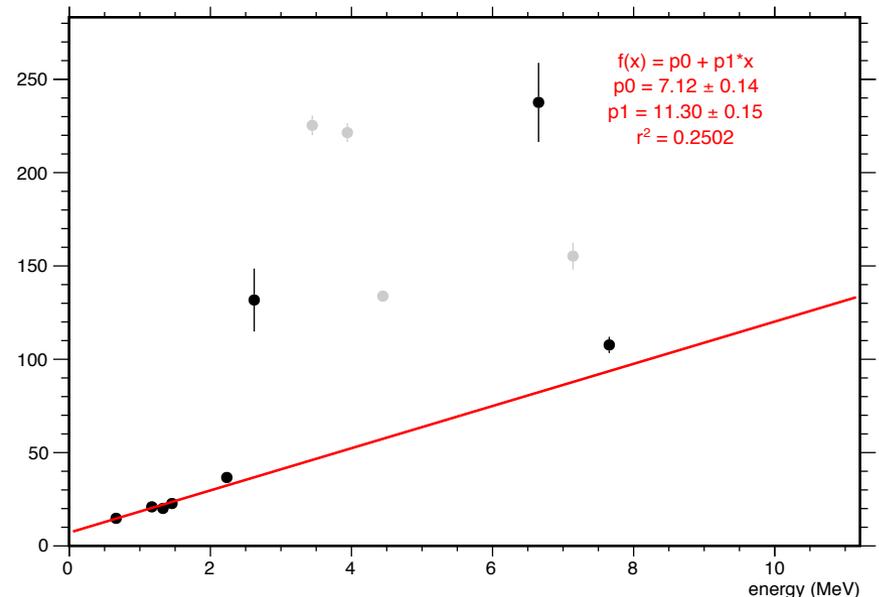

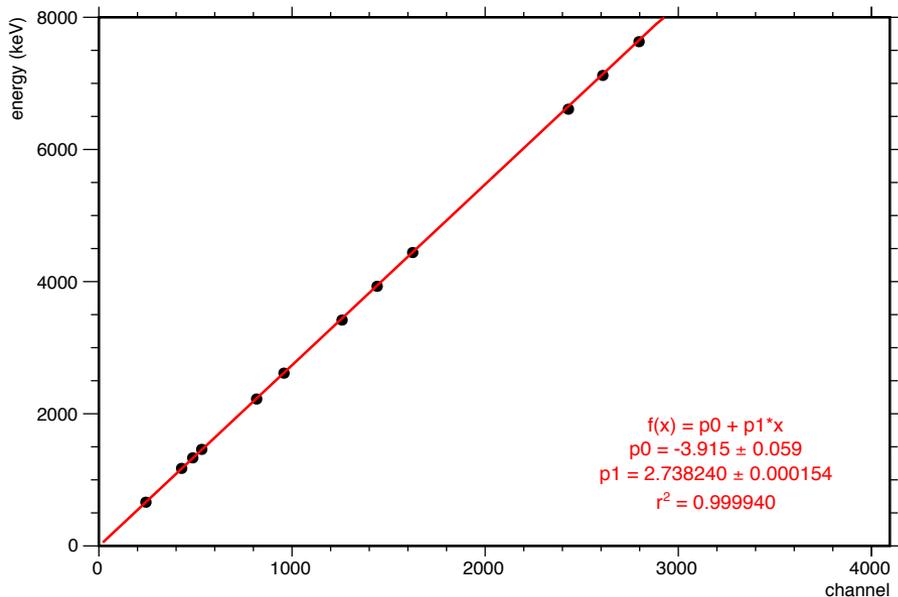

# HPGe #1 small

good energy calibration

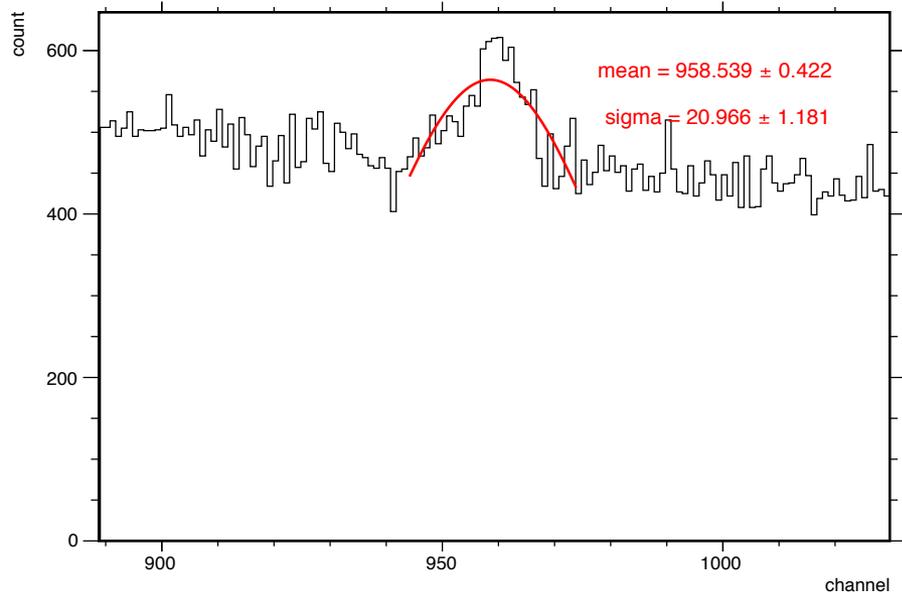

energy resolution

- $^{76}\text{Fe}(n,\gamma)$  SE should be worse resolution than DE (same as E465)
- $^{208}\text{Tl}$  has poor resolution, only 2 poor fits so need background data too
- $(20.10 \pm 0.15)$  keV resolution at 1332 keV

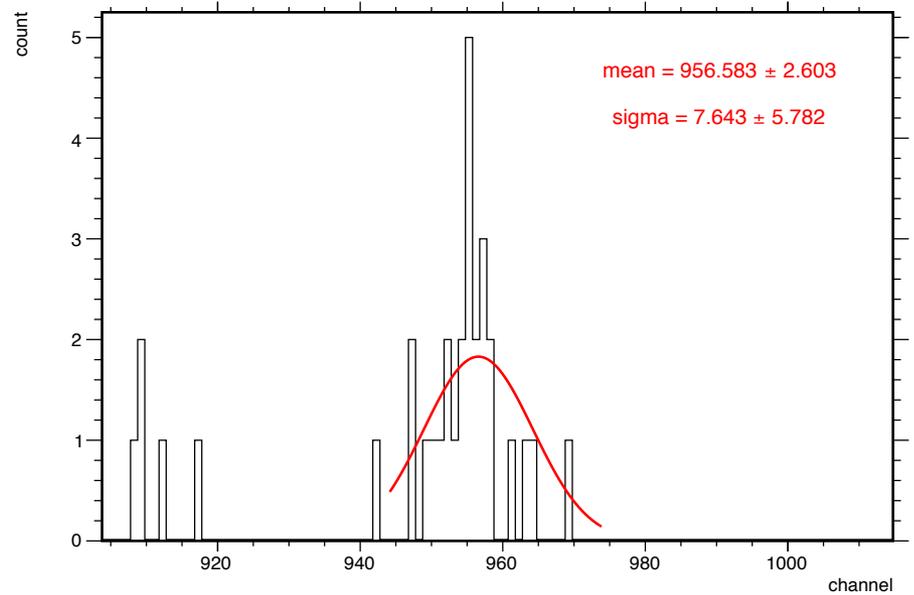

only 2 poor fits for  $^{208}\text{Tl}$

AmBeFe sum (runs 10–12)

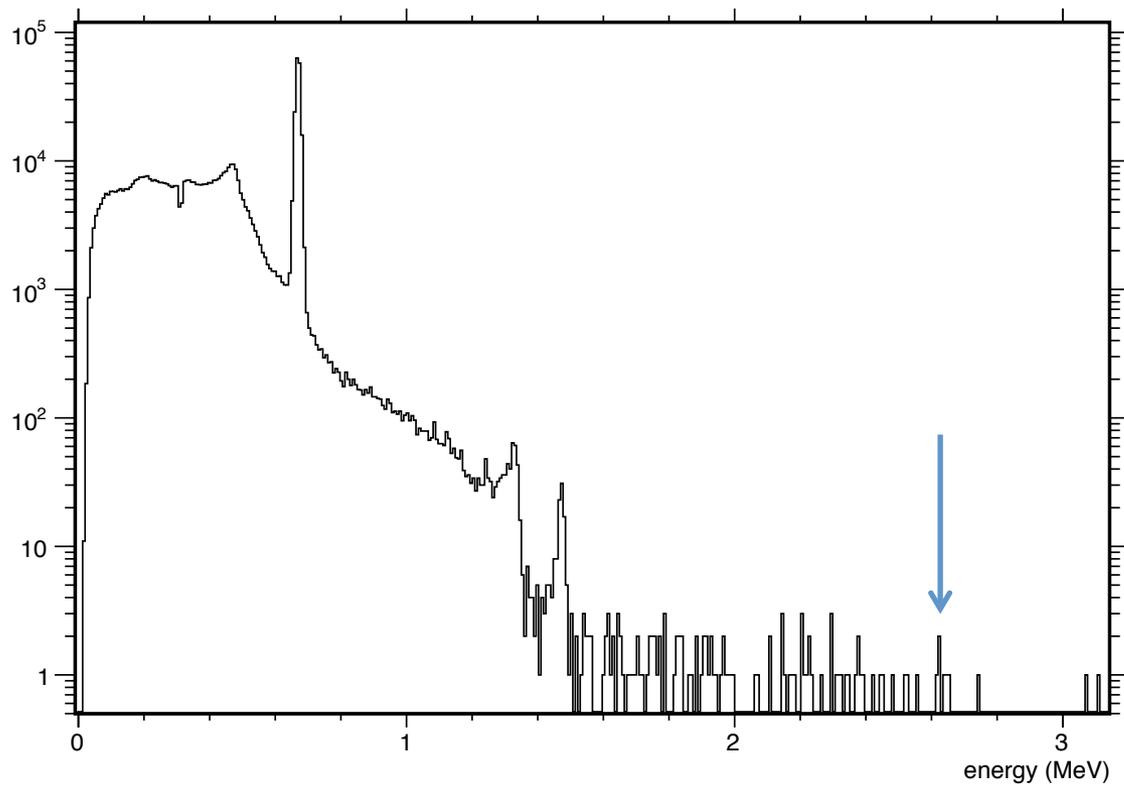

$^{137}\text{Cs}$  run 8

# HPGe #2 large calibration

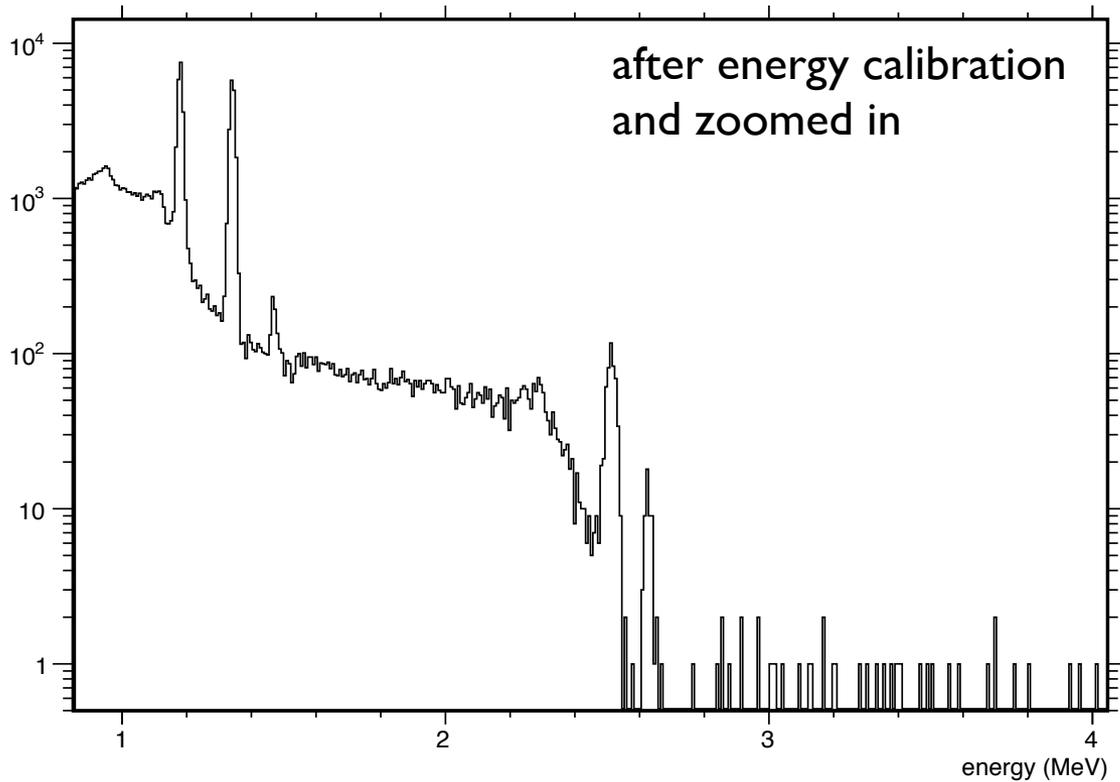

# $^{137}\text{Cs}$

- 20170220
- run I
- 2 peaks: 662 keV,  $^{40}\text{K}$
- can't see  $^{208}\text{Tl}$ , only 29 s livetime

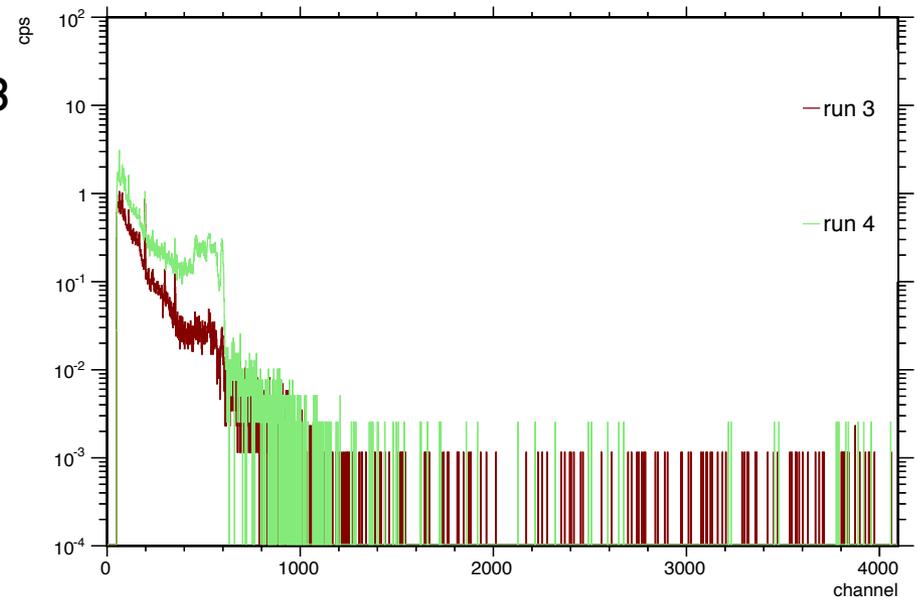

# $^{60}\text{Co}$

- 20170220
- run 2
- 4 peaks: 1.17 MeV, 1.33 MeV,  $^{40}\text{K}$ ,  $^{208}\text{Tl}$
- can resolve sum peak and  $^{208}\text{Tl}$

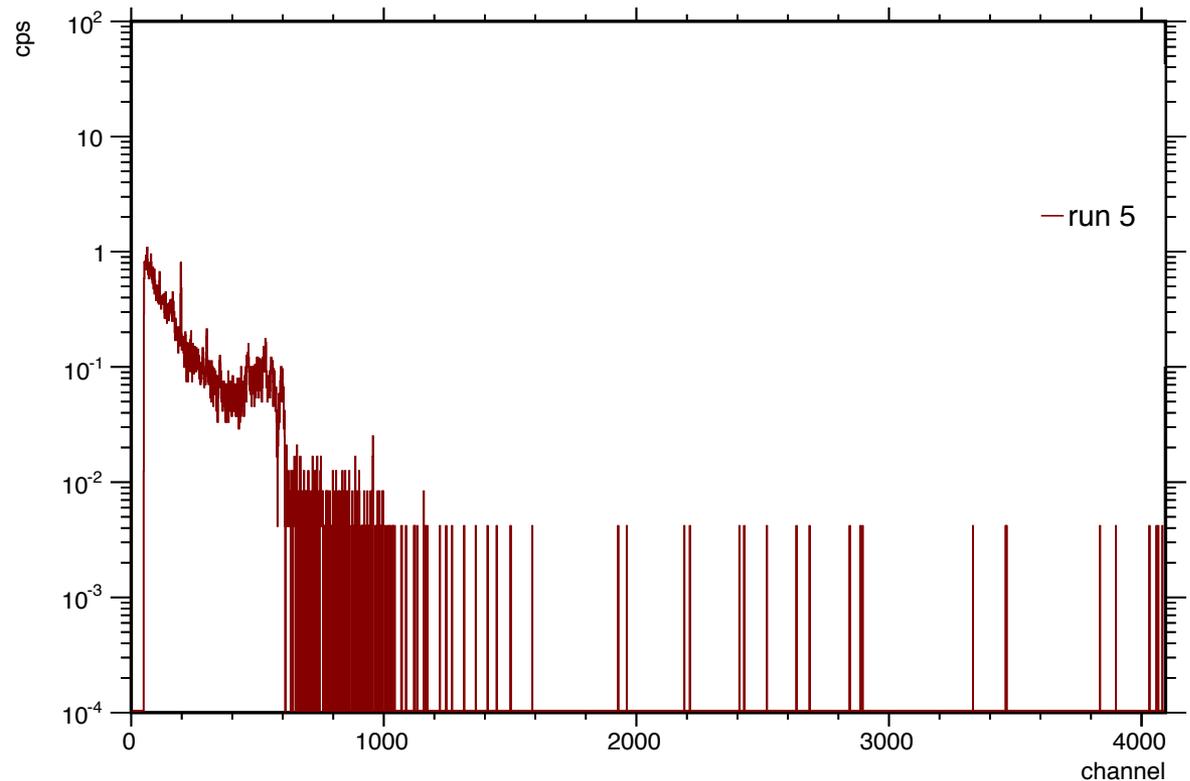

# AmBe

- 20170220
- runs 3–4
- Ashida-san says there was polyethylene and iron too, must update run notes
- 6 peaks =  $^{40}\text{K}$ ,  $^1\text{H}(n, \gamma)$ ,  $^{208}\text{Tl}$ , AmBeDE, AmBeSE, AmBe
- can't see Fe peaks because livetime too short
- can't see AmBeSE or AmBeDE in run 3
- can't see H in run 4
- spectra and rates are different
- don't use either, for now

# AmBeFe

- 20170220
- run 5
- 6 peaks =  $^{40}\text{K}$ ,  $^1\text{H}(n,\gamma)$ ,  $^{208}\text{Tl}$ , AmBeDE, AmBeSE, AmBe
- can't see Fe peaks because livetime too short

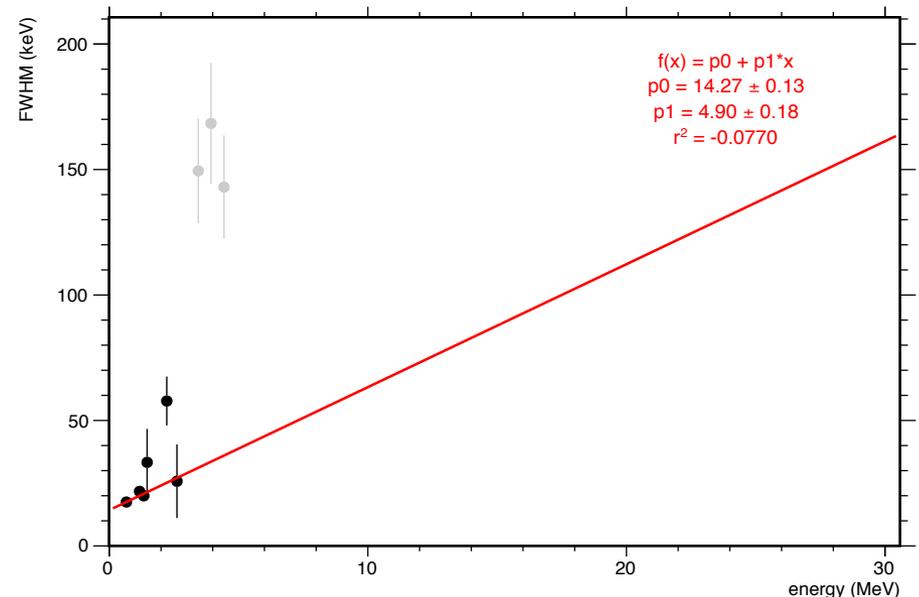

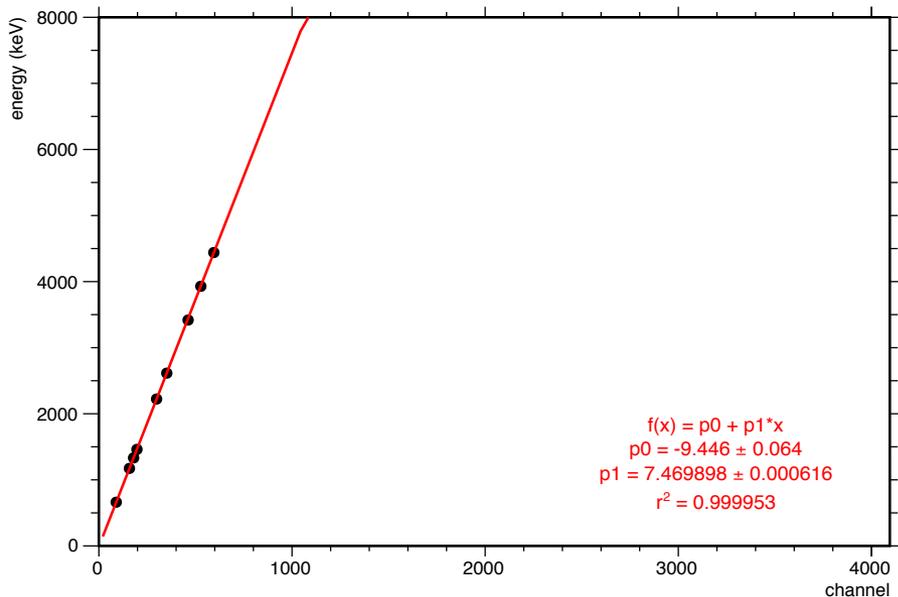

# HPGe #2 large

## energy calibration

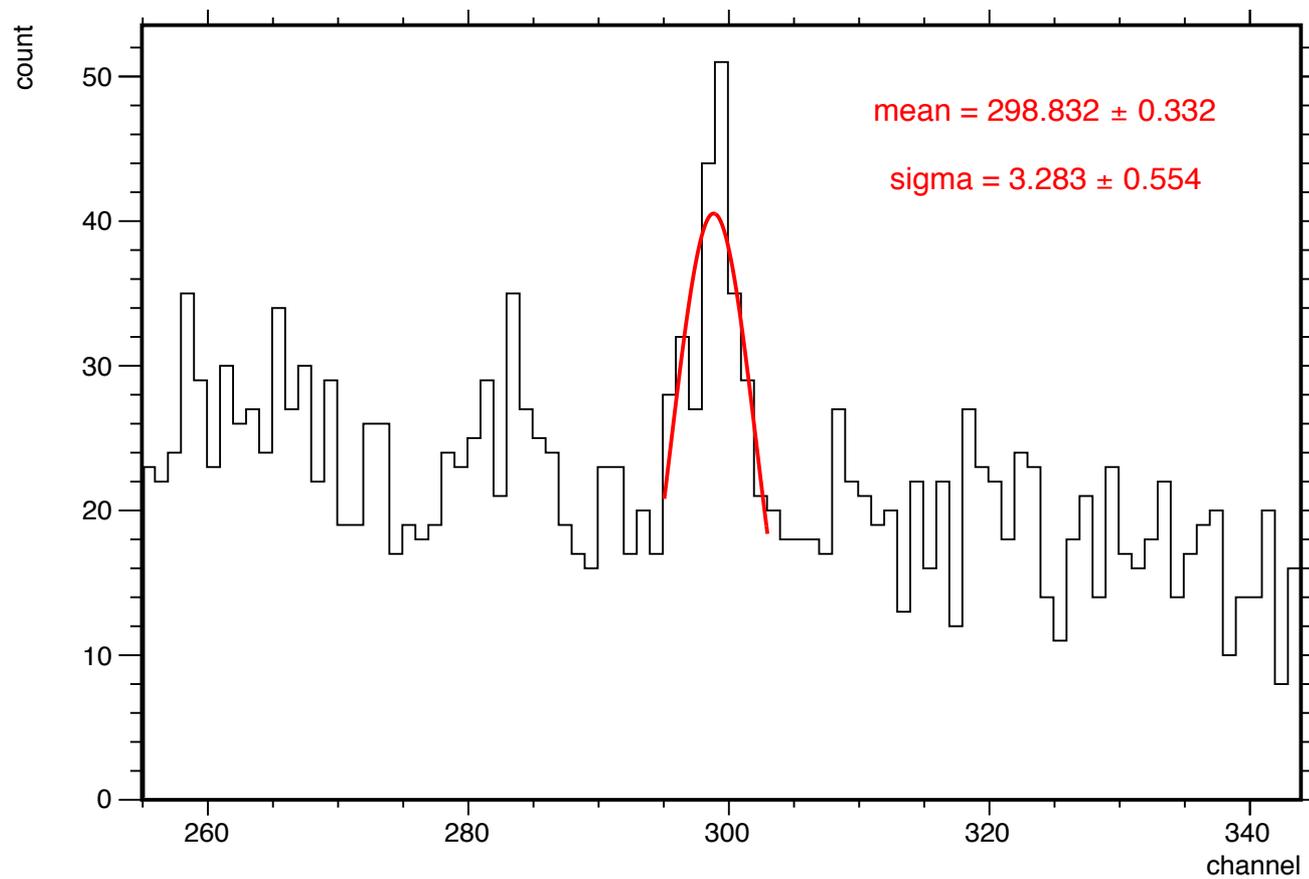

- couldn't adjust dynamic range, only interested up to ~10 MeV not 30 MeV

## energy resolution

- good that  $^{76}\text{Fe}(n,\gamma)$  SE has worse resolution than DE
- $^1\text{H}(n,\gamma)$  has poor resolution, maybe because only 1 fit?
- $(19.96 \pm 0.13)$  keV resolution at 1332 keV

# $^1\text{H}(n,\gamma)$ fit

# Next steps

- background runs
- efficiency, data and FLUKA
- signal runs
