

Corina Nantais
Nu/DM meeting
28 June 2018

- FLUKA requires updated gfortran on neut computers
- BdNMC default runs ok, but burn-in timeout for SK
- SelectionPlots mode for neutrino flavour and energy cut (no update for Hiro)

FLUKA requires updated gfortran

- want FLUKA on neut computers
- neut19 is x86_64 with gfortran 4.4.7 and gcc 3.4.6
- first used in 2014, FLUKA required gfortran ≥ 4.6 so Dima setup on neut19 gfortran 4.7.2
- last updated to fluka2011.2c.5 in Feb 2017, gfortran requirement hadn't changed
- from Feb 2018 until now, fluka2011.2x releases and fluka2011.2c no longer available
- FLUKA requires gfortran ≥ 6.3 , urges gfortran ≥ 7 for future releases
- emailed Thomas

FLUKA download pages

GNU/Linux (i686 and x86_64)

requires gcc/g77 (version >= 3.4)

GNU/Linux (x86_64)

requires gcc/gfortran (version >= 6.3)

MAC/OS (x86_64)

requires gcc/gfortran (version >= 6.3)

The Linux x86 version must be compiled at 32 bits with g77 but can run on both 32 and 64 bit machines while the Linux x86_64 version must be compiled with gfortran and works only on 64 bits machine. The MAC/OS x86_64 version must be compiled with gfortran and works only on 64 bits machine. The latter is still tentative, we cannot exclude some issues with that version. The code has been checked and validated for these platforms/compilers only for the time being.

BdNMC default runs ok, but burn-in timeout for SK

- Rose's Aug 2017 report, Simulating light dark matter production at T2K and scattering at Super-Kamiokande
- ran default BdNMC 3.2.0 parameter.dat and used Rose's code to generate histograms
- no simple SK parameter.card from Rose so made my own, burn in timeout
 - reduced samplesize from 2000 to 500
 - use default max_trials, instead of Rose's 8e8
 - one production channel (pi0_decay), instead of three (pi0_decay, eta_eta, and V_decay)
 - changed to sanfordwang, instead of bmpt
 - is it still geometry? already SK scaled and efficiency reduced by 1000

SelectionPlots mode for neutrino flavour and energy cut

- many low energy ncqe events in current work, compared to 17Jan2016
